ABOUT THE BRKR

This series is built to turn a smooth accelerator into loud results. The **painted maple core** is **carbon-reinforced** using JFlowers' proprietary process and finished with the bold **BRKR** overlay in your color of choice. Pick the **wrapless** version for a clean, quick release, or the **sport-wrap** for extra traction when you really lean on the stroke. Under the hood, a **3/8-8 Radial** joint keeps the hit connected and consistent.

Specs that settle you in fast: standard **58 inches**, **19.5 oz**, and a **≈13 mm** black ferrule paired to a **phenolic** tip. Rear **extensions** are available at checkout if you like a touch more reach or counter-balance.

Extras you'll appreciate: All JFlowers cues ship from Jacksonville, Florida for North America and direct from the factory for international orders (typical transit: US ~4–5 days, International ~7–8 days).

DESIGN HIGHLIGHTS

- **Two builds, two colors:** **Wrapless** or **embossed leather sport wrap**, finished in **Red** or **Blue** with the bold **BRKR** logo overlay.
- **Core & construction:** **Painted maple** with **carbon-reinforced** technology for stability through impact—clean lines under durable clear.
- **Break geometry:** **Stiff, break-tuned carbon** profile that favors a quick, square hit without needing to overswing.
- **Spec sheet:** **58 in** overall, **19.5 oz** standard, **3/8-8 Radial** joint, **rear extension options** for added reach and balance.

WHY CHOOSE THIS CUE

You want a breaker that fits your hand and your style. BRKR lets you pick the **grip** and the **colorway** while the carbon platform and **Radial** joint take care of power and feel.

POPULAR FAQS

Q: Why a 3/8-8 Radial on a breaker?

A: It's a **solid, self-aligning fit** that reports back feel during repeated high-energy hits—great for a cue that's built to take impact.

Q: Can I go heavier than 19.5 oz?

A: Sometimes—**case by case**. Some BRKR builds accept added weight bolts, but not all. If you need more mass, reach out before ordering and we'll check availability. **However**, due to physics and **energy transferred** by faster momentum (getting from point A to point B quickly, i.e. stroke), 19.5 is a **perfect** weight.

Q: Does the 13 mm face make the break less forgiving?

A: No—the **≈13 mm** window balances accuracy with stability. If you're coming from a 14 mm breaker, you'll likely notice **cleaner center-ball contact** without losing pop.

JFLOWERS BRKR VIDEO REVIEW

Made by a genuine customer. Note, the BRKR leather is the same cue as the [BRKR no-wrap break cue](#).
